

**FÜLLY** is a free application designed for companies responsible for maintaining cleanliness and order in municipalities, parks, as well as buildings and facilities such as shopping centers, airports, and exhibition halls.

Label containers with a QR code – after scanning it, a dedicated, simple, and intuitive form allows users to easily report overflowing or damage. Optionally, a photo can be attached to the report.

## How the application works

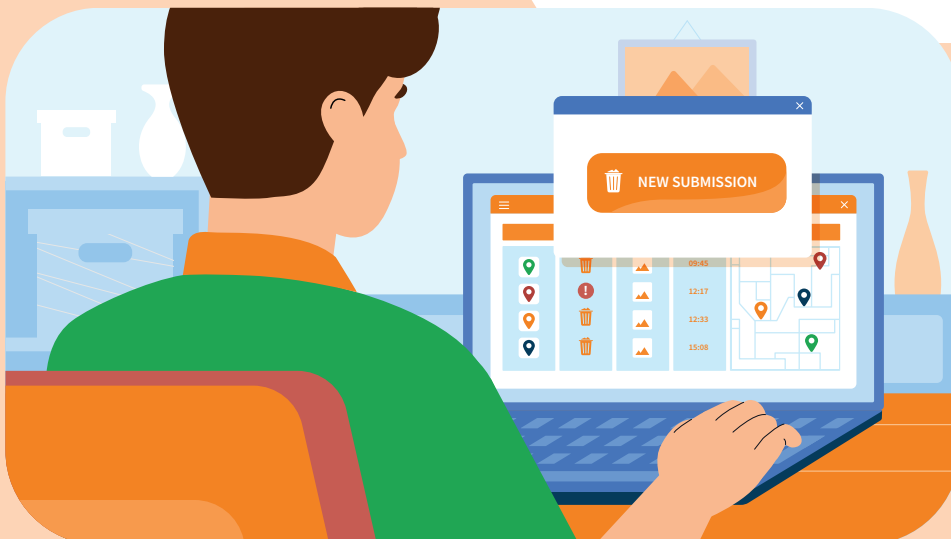

**FULLY** simplifies the process of reporting issues related to the use of bins and containers. If a container is full or damaged, simply scan the QR code to notify the relevant service teams handling reports.

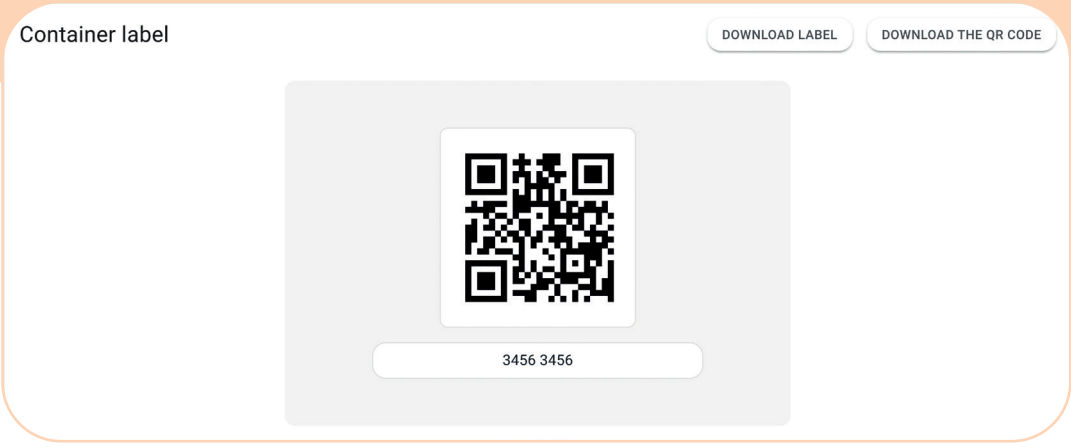

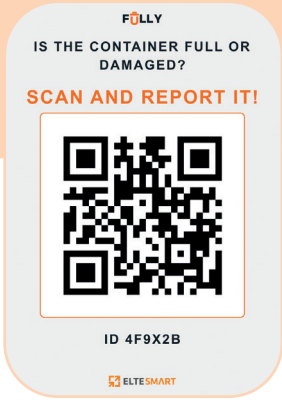

All reports are registered in real time, which increases team efficiency and helps direct staff to where they are most needed.

## Where to get QR codes?

QR codes can be generated free of charge directly within the **FULLY** application. It is also possible to order ready-made packages with pre-printed QR code labels.

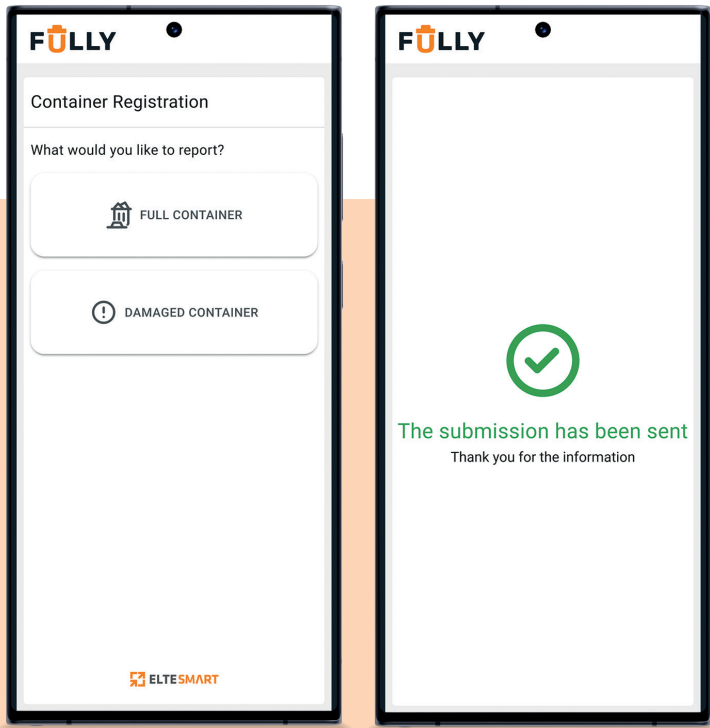

Example QR code

## Advantages of the FÜLLY application

- Simple and intuitive reporting process
- No need to download an app to submit a report
- Ability to generate QR codes directly within the application
